Mohammad Saleh Bataineh	mbataineh@sharjah.ac.ae	C13-TH006	06	Lecture Undergraduate	TR 1100 - 1215

Course Description:

Limits and continuity. Derivatives, applications of derivatives in optimization, linearization and graphing, the Mean Value Theorem. Integration, the Fundamental Theorem of Calculus, areas, volumes of solids of revolution, arc length. Conic sections.

Course Objectives/Goals:

The goals of this Course are to:

- Introduce the fundamental concepts of calculus: limits, continuity, differentiability and integrability.
- Train them on applying these concepts to problems that arise in science and engineering.

Course Learning Outcomes:

By the end of successful completion of this Course, the student will be able to:

1. Distinguish continuous, differentiable, and integrable functions.
2. Find the limits and test for continuity.
3. Compute derivatives.
4. Evaluate integrals.
5. Sketch the graph of a function using asymptotes, monotonicity, and concavity.
6. Calculate areas and volumes of revolution.
7. Formulate and solve time-related and optimization problems.

Alignment of Course Student Learning Outcomes to Program Student Learning Outcomes

Program Learning Outcomes (PLOs)	Course Learning Outcomes (CLOs)
Analyze statistical data to identify and solve applied scientific problems	- Distinguish continuous, differentiable, and integrable functions. - Formulate and solve time-related and optimization problems. - Find the limits and test for continuity. - Compute derivatives. - Evaluate integrals. - Sketch the graph of a function using asymptotes, monotonicity, and concavity. - Calculate areas and volumes of revolution.
Formulate mathematical models to solve real-life problems in a contemporary global and societal context.	- Compute derivatives. - Evaluate integrals. - Sketch the graph of a function using asymptotes, monotonicity, and concavity. - Calculate areas and volumes of revolution.
Communicate mathematical knowledge directly and indirectly with precision, clarity and organization.	- Compute derivatives. - Evaluate integrals. - Sketch the graph of a function using asymptotes, monotonicity, and concavity. - Calculate areas and volumes of revolution.

Program Learning Outcomes (PLOs)	Course Learning Outcomes (CLOs)
Apply scientific experiments and research methods to continuously build on existing knowledge with modern and innovative ideas.	- Distinguish continuous, differentiable, and integrable functions. - Find the limits and test for continuity. - Compute derivatives. - Evaluate integrals. - Sketch the graph of a function using asymptotes, monotonicity, and concavity. - Calculate areas and volumes of revolution.
Apply a broad range of core mathematical knowledge and techniques, including advanced calculus, linear algebra, geometry, differential equations, probability, and statistics.	- Distinguish continuous, differentiable, and integrable functions. - Find the limits and test for continuity. - Compute derivatives. - Evaluate integrals. - Sketch the graph of a function using asymptotes, monotonicity, and concavity. - Calculate areas and volumes of revolution.
Identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.	- Distinguish continuous, differentiable, and integrable functions. - Formulate and solve time-related and optimization problems. - Find the limits and test for continuity. - Compute derivatives. - Evaluate integrals. - Sketch the graph of a function using asymptotes, monotonicity, and concavity. - Calculate areas and volumes of revolution.
Apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.	- Distinguish continuous, differentiable, and integrable functions. - Formulate and solve time-related and optimization problems. - Find the limits and test for continuity. - Compute derivatives. - Evaluate integrals. - Sketch the graph of a function using asymptotes, monotonicity, and concavity. - Calculate areas and volumes of revolution.
Identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.	- Distinguish continuous, differentiable, and integrable functions. - Formulate and solve time-related and optimization problems.

Program Learning Outcomes (PLOs)	Course Learning Outcomes (CLOs)
	- Find the limits and test for continuity. - Compute derivatives. - Evaluate integrals. - Sketch the graph of a function using asymptotes, monotonicity, and concavity. - Calculate areas and volumes of revolution.
Apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.	- Distinguish continuous, differentiable, and integrable functions. - Formulate and solve time-related and optimization problems. - Find the limits and test for continuity. - Compute derivatives. - Evaluate integrals. - Sketch the graph of a function using asymptotes, monotonicity, and concavity. - Calculate areas and volumes of revolution.
Identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.	- Distinguish continuous, differentiable, and integrable functions. - Formulate and solve time-related and optimization problems. - Find the limits and test for continuity. - Compute derivatives. - Evaluate integrals. - Sketch the graph of a function using asymptotes, monotonicity, and concavity. - Calculate areas and volumes of revolution.

Weekly Distribution of Course Topics/Contents

Week	Topic	Comments*	CLOs
1	The Concept of Limit Computation of Limits	section 1.2 section 1.3	1,2
2	Continuity and Its Consequences	section 1.4	1,2
3	Limits Involving Infinity	section 1.5	1,2
4	Tangent Lines and Velocity The Derivative	section 2.1 section 2.2	3

Week	Topic	Comments*	CLOs
5	Computation of Derivative: The Power Rule The Product and Quotient Rules The Chain Rule Derivatives	Section 2.3 section 2.4 section 2.5	3
6	Computation of Derivative: The Power Rule The Product and Quotient Rules The Chain Rule Derivatives	Section 2.6 section 2.7	3
7	Implicit Differentiation and Inverse Trig. Func. The Mean Value Theorem	section 2.8 section 2.10	3
8	Implicit Differentiation and Inverse Trig. Func. The Mean Value Theorem	section 3.1 section 3.2 section 3.3	3
9	Increasing and Decreasing Functions Concavity and The Second Derivative Test	section 3.4 section 3.5	3
10	Overview of Curve Sketching Optimization Related Rates	section 3.6 section 3.7 section 3.8	5,7
11	Antiderivatives Sum and Sigma Notation	section 4.1 section 4.2	4
12	Area The Definite Integral	section 4.3 section 4.4	4
13	The Fundamental Theorem of Calculus Integration by Substitution	section 4.5 section 4.6	4
14	Area between Curves Volumes (The methods of Disks and Washers)	section 5.1 section 5.2	6
15	Arc Length	section 5.4	6
16	Final Exam		

Information on out-of-class assignments with due dates for submission

Assignment/Activity	Due Date	Comments
Assignment 2	Week 6	Online Assignment will be delivered through the McGraw-Hill Connect system, covering material from Chapters 2
Assignment 3	Week 9	Online Assignment will be delivered through the McGraw-Hill Connect system, covering material from Chapters 3
Assignment 4	Week 12	Online Assignment will be delivered through the McGraw-Hill Connect system, covering material from Chapter 4 and 5
Assignment 1	Week 3	Online Assignment will be delivered through the McGraw-Hill Connect system, covering material from Chapters 1

Students' Assessment:

Students are assessed as follows:

Assessment Tool(s)**	Date	Weight (%)
Midterm Exam	Announced in University Calendar	30
Quizzes	Weeks 4, 6, 9, 11	20
Assignments	Weeks 3, 6, 9, 12	10
Final Exam	Announced in University Calendar	40
Total		100

Course Outcome Assessment Plan:

Course LOs	Teaching/Learning Method(s)	Assessment Tool(s)	Performance Indicators	UoS competencies	Other competencies
Distinguish continuous, differentiable, and integrable functions.	- Lectures - Problem-solving - Team based learning - Team discussion - Teamwork	- Assignments - Exams - Quizzes	80% of students achieve 80% of CLO	- Critical and analytical thinking - Oral communication - Written communication - Teamwork or collaboration - Work ethics or professionalism	
Find the limits and test for continuity.	- Lectures - Panel discussion - Problem-solving - Group Discussion	- Assignments - Exams - Quizzes	80% of students achieve 80% of CLO	- Critical and analytical thinking - Oral communication - Teamwork or collaboration - Work ethics or professionalism - Leadership skills - Social responsibility / ethics	
Compute derivatives.	- Case studies - Lectures - Problem-solving	- Assignments - Exams - Quizzes	80% of students achieve 80% of CLO	- Critical and analytical thinking - Oral communication	

Course LOs	Teaching/Learning Method(s)	Assessment Tool(s)	Performance Indicators	UoS competencies	Other competencies
				- on - Written communication - Teamwork or collaboration - Innovation / creative thinking	
Evaluate integrals.	- Case studies - Lectures - Problem-solving	- Assignments - Exams - Quizzes	80% of students achieve 80% of CLO	- Critical and analytical thinking - Oral communication - Written communication - Teamwork or collaboration - Work ethics or professionalism	
Sketch the graph of a function using asymptotes, monotonicity, and concavity.	- Case studies - Lectures - Panel discussion - Problem-solving	- Assignments - Exams - Quizzes	80% of students achieve 80% of CLO	- Critical and analytical thinking - Oral communication - Written communication - Teamwork or collaboration - Work ethics or professionalism	
Calculate areas and volumes of revolution.	- Case studies - Lectures - Panel discussion - Problem-solving	- Assignments - Exams - Quizzes	80% of students achieve 80% of CLO	- Critical and analytical thinking - Oral communication - Written communication	

Course LOs	Teaching/Learning Method(s)	Assessment Tool(s)	Performance Indicators	UoS competencies	Other competencies
				on - Teamwork or collaboration	
Formulate and solve time-related and optimization problems.	- Case studies - Group work - Lectures - Problem-solving - Teamwork	- Assignments - Exams - Quizzes	80% of students achieve 80% of CLO	- Critical and analytical thinking - Oral communication - Written communication - Teamwork or collaboration - Work ethics or professionalism - Leadership skills	

Scope and Nature of Assessment Tools:

Assessment tools are designed to evaluate students' understanding, application, and mastery of course content through various methods. The scope and nature of these tools vary based on the objectives, learning outcomes, and the depth of evaluation required. The assessment tools used in this context include:

1. **Problem-Solving**
 - Purpose: To assess students' ability to analyze and solve mathematical or computational problems.
 - Assessment: Individual or group problem-solving exercises, written responses, and coding challenges.
2. **Written Exams**
 - Purpose: To test theoretical understanding, problem-solving skills, and conceptual clarity.
 - Assessment: Short-answer questions, multiple-choice questions, essay-based responses, and problem-solving tasks.
3. **Programming Tests**
 - Purpose: To evaluate students' programming skills under exam conditions.
 - Assessment: Hands-on coding tasks, debugging exercises, algorithmic problem-solving.
4. **Project and Presentation**
 - Purpose: To assess students' ability to apply knowledge in practical settings.
 - Assessment: Project quality, innovation, documentation, teamwork, and presentation skills.

Assignment and Reports

- Scope: Assignments and reports are essential for assessing students' research, analysis, and writing skills.
- Types: Assignments: These include problem-solving tasks, case studies, programming tasks, and AI-based applications.
- Reports: Detailed documentation of projects, research findings, or analytical reviews of a topic.
- Assessment Criteria: Clarity and depth of explanation.
- Accuracy and originality of work.

- Proper use of references and formatting.
- Apply theoretical concepts in practical scenarios.

Evaluation Metrics

- Scored Marks: Based on correctness, completeness, and quality.
- Participation: Assessed through engagement in discussions and group activities.
- Quality of Project: Measured by the depth of research, innovation, technical execution, and overall presentation.

This structured assessment approach comprehensively evaluates students' knowledge, skills, and competencies across different learning modalities.

Teaching and Learning Resources:

Textbook(s):

Smith, R. T., & Minton, R. B. (2008). Calculus. 4th Edition. Mc Graw Hill..

Recommended Readings:

- Weir, M. D., Hass, J., & Giordano, F. R. (2005). Thomas' Calculus. 11th Edition. Addison-Wesley.

Attendance policy:

Attendance is compulsory. A student missing 10% of the total allocated course hours will receive 1st warning notice and a student missing 15% will receive 2nd warning notice. A student missing 20% will be forced to withdraw (in accordance with the university regulations).

Plagiarism/Cheating:

Students are expected to do their own work. You are allowed to work on assignments in teams only if specified by the instructor. In other words, students are encouraged to communicate about general principles of the course, but all assigned homework must be done on an individual basis. The instructor is available to provide any assistance that you may need. Cheating is considered a serious offense by the university. You should be aware of the severe penalty for cheating (refer to the student code of conduct published in the university catalogue).

Grading rubrics:

Grading Rubric for Course Assignments					
Scaled Score:		0/1	2	3	4
Criteria	Weight	Below Standard	Approaching Standard	At Standard	Exceeds Standard
Focus: Purpose	10%	No awareness	Shows limited awareness of purpose.	Shows awareness of purpose.	Purpose is clear.
Main idea	10%	No main idea	Vague sense of a main idea, weakly supported throughout the paper.	There is a main idea supported throughout most of the paper.	Clearly presents a main idea and supports it throughout the

Grading Rubric for Course Assignments					
Scaled Score:		0/1	2	3	4
					paper.
Organization: Overall	5%	No sense of organization	There is a sense of organization, although some of the organizational tools are used weakly or missing.	Good overall organization, includes the main organizational tools.	Well-planned and well-thought out. Includes title, introduction, statement of main idea, transitions, and conclusion.
Organization: Paragraphs	5%	Paragraphs lack clear ideas	Some paragraphs have clear ideas, support from examples may be missing and transitions are weak.	Most paragraphs have clear ideas, are supported with some examples and have transitions.	All paragraphs have clear ideas, are supported with examples and have smooth transitions.
Content	50-60%	Content is not sound	Content is sound and solid; ideas are present but not particularly developed or supported; some evidence, but usually of a generalized nature.	Well-presented and argued; ideas are detailed, developed and supported with evidence and details, mostly specific.	Exceptionally well-presented and argued; ideas are detailed, well-developed, supported with specific evidence and facts, as well as examples and specific details.
Research (if assignment includes a research component)	10%	The paper does not use adequate research or if it does, the sources are not integrated well. They are not cited correctly according to MLA style, nor listed correctly on the Works Cited page.	Sources support some claims made in the paper, but might not be integrated well within the paper's argument. There may be a few errors in MLA style.	Sources are well integrated and support the paper's claims. There may be occasional errors, but the sources and Works Cited conform to MLA style sheet.	Sources are exceptionally well-integrated and they support claims argued in the paper very effectively. Quotations and Works Cited conform to MLA style sheet.
Style: Sentence structure, word, choice, tone	5%	Sentences aren't clear	Sentences are generally clear word usage generally appropriate, details are somewhat adequate but may have awkward structure or unclear content; there may be patterns of punctuation errors.	Sentences are clear, word usage appropriate, details are enough but may lack variation; a few may be awkward and there may be a few punctuation errors.	Sentences are clear, word usage appropriate; details are enough and varied in pattern, from simple to complex, with excellent use of punctuation.

Grading Rubric for Course Assignments				
Scaled Score:		0/1	2	3
Grammar and Mechanics	5%	Continuous errors	Shows a pattern of errors in spelling, grammar, syntax and/or punctuation. Could also be a sign of lack of proof-reading.	Excellent grammar, spelling, syntax and punctuation.

Grading Rubric for Evidence-Based Practice Paper				
Scaled Score:		0/1	2	3
Criteria	Weight	Below Standard	Approaching Standard	At Standard
Clear explanation of key issues Brief background of the medical case / disease. Understanding of the nutrition related issues.	15%	Shows little understanding of the medical case / disease and the nutrition related issues.	Shows some understanding of the medical case / disease and the nutrition related issues,	Shows adequate understanding of the medical case / disease and the nutrition related issues,
Valid arguments; identification of relevant facts - Medical case specific nutrition diagnosis is identified. - Appropriate PICO question formulation	20%	Inappropriate labeling for the medical case specific nutrition diagnosis. PICO question poorly formulated and analyzed.	Appropriate labeling of the medical case specific nutrition diagnosis. PICO question clearly identified and analyzed.	Sufficient labeling of the medical case specific nutrition diagnosis. PICO question appropriately identified, analyzed, and supported.
Appropriate analysis, evaluation, synthesis for the specific entity's environment identified. Thorough literature review for relevant, up-to-date systematic review articles. Complete data the type of research, populations used) on which to base a PICO (Population, intervention, comparison, outcome) analysis and outcomes	20%	Non-relevant literature review for systematic review articles. In sufficient data about type of research, populations used) on which to base a PICO analysis	In sufficient literature review for systematic review articles. In complete data about type of research, populations used) on which to base a PICO analysis	Sufficient and recent literature review for systematic reviews articles. Proper inclusion of all the PICO question elements.
Conclusions and recommendations are congruent with case evidence based. Presented-specific recommendations	40%	Recommendations change/ or re enforce a practice / and conclusions not provided.	Recommendations / re enforcement of current practice / and conclusions is inadequately	Recommendations / re enforcement of current practice / and conclusions adequately provided.

Grading Rubric for Evidence-Based Practice Paper				
Scaled Score:		0/1	2	3
Criteria	Weight	Below Standard	Approaching Standard	At Standard
change/ or reenforce a practice / and conclusion. • Specific justification to support the analysis and conclusions. • Acknowledged limitations for implementing changes (human, financial resources, time, cost per		Lack of justification to support the analysis and conclusions necessary to support the analysis. Limitations for implementing recommendations not provided	provided. Justification to support the analysis and conclusions not addressed properly. Limitations for implementing recommendations not fully referred.	Justification to support the analysis and conclusions addressed properly. Limitations for implementing recommendations fully referred
Scholarly Format: Correct grammar, spelling, punctuations, and layout. Use of APA format for citations	5%	Frequent spelling punctuations and layout mistakes. Language lacks clarity. Not using APA format for citations	Spelling and punctuations mistakes (less than 10 mistakes). APA format used but with errors	All the elements are satisfied

* If a case of plagiarism is established, the Course assignment will be given zero grade and other actions will be taken according to the university bylaws.
